

The

Adventures of

Med of Ian

By: Brittany Hall and Condia Smith

Once upon a time, there was a boy Med of Ian. He had 2 excellent teachers, Sir Rise and Sir Run.

Boy Med despised having to measure the distance of object from one point to another point, in his woodshop class.

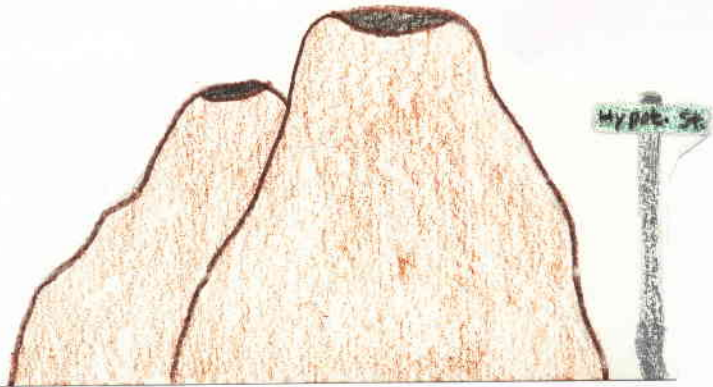

However, he didn't care much for his other construction class either, because he always had to measure the height of everything before he would cut out his design.

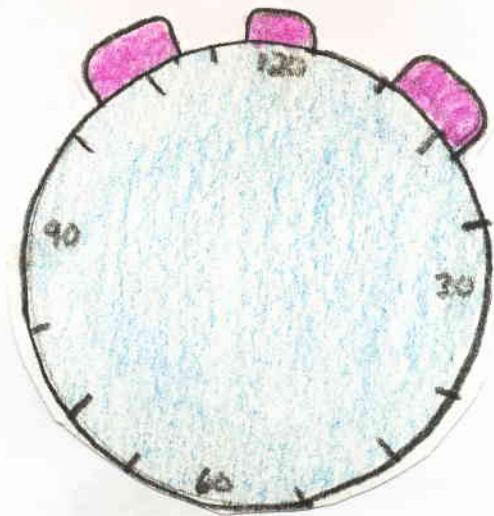

Then one day Sir Rise and Sir Run told boy Med of Ian that he had to rescue Mida of Point. She was stuck on top of a volcano while trying to rescue her dog. Boy Med knew that if he wanted to become a superhero, then he would have to rescue her.

On his way there, he passed through the Town of Angle. As he was walking through, the evil man of the town warned him that the semicircle of part of the volcano had a tiger on it, so now Boy Med of Ian would have to go up the opposite side of it.

Boy Med had finally reached the street of Hypotenuse. He looked straight ahead and saw a ladder with the height written along the side of it. So then Boy Med thought back on what his teachers taught him, and then it clicked... he had to find the slope of the volcano. Boy Med thought this should be easy, because he knew it had an equilateral triangular face on it since it was a regular Triangular prism.

Although, there was one more catch, he had to get up there and back down in 2 minutes.

“What is the quickest way,” he thought. “Should I go up the altitude the hypotenuse side?” After his calculations, Boy Med noticed the altitude was shorter.

So boy Med quickly ran up the volcano's altitude, closer to the side with out the tiger, gently grabbed Mida of town Point, and ran back down with 20 seconds left.

That night when Boy Med of Ian returned home, Mida of Point, Sir Rise, and Sir Run were waiting for him with a cape. Now Boy Med of Ian wasn't just a boy anymore, but a super hero too!
